

Design a carton invention. Focus on nutrition, sustainability, and creativity. Enter to win!

## WELCOME TO MADE BY MILK!

Dear Entry Kit Recipient,

On behalf of Evergreen Packaging and the Made By Milk™ team, I'd like to thank you for expressing interest in the Fall 2016 Made By Milk™ Carton Construction Contest: **Inventions!**

This activity is a creative way to engage a team of your students to complete a fun, hands-on project from start to finish while giving your school a chance to win one of 14 prizes, up to \$5,000. A variety of skills are needed for the construction of your **Inventions!** creation – from design and engineering to constructing and art skills – so no student is left out. The project also works well as a STEM activity. Students that have already been involved in this program have expressed how much fun they had throughout the entire process. And we hope your students will enjoy it just as much, if not more!

Enclosed in this folder you will find the following tools:

### IN THE RIGHT POCKET:

**Theme** This semester's theme is **Inventions!**, so your students' creation needs to represent a large or small invention of the past or even a future innovation. Be creative!

**Important Dates** for this contest. Entries due on November 16th.

**Prizing** and how it works to get you on the right track.

**Contest Rules and Judging Criteria** so your project is compliant with the program.

**Frequently Asked Questions** to answer any additional questions you might have.

Please keep in mind that the complete lists of Contest Rules and FAQ's can be found on the contest website: [www.MadeByMilkContest.com](http://www.MadeByMilkContest.com).

### IN THE LEFT POCKET:

**Activity** A fun word search activity page to support team building and contest concepts.

**Cartons 101** The care and benefits of cartons.

**Made By Milk™ Poster** The poster can be displayed in your school to promote the Made By Milk™ contest to your students.

**Carton Receptacle Poster** This poster should be placed on the receptacle you have designated in your cafeteria to collect the empty milk cartons for your project. Just as a reminder, you will need to allow the rinsed-out cartons to dry for 2+ days in a proper receptacle. Cartons should be left in open air, not sealed in a bag, to prevent mold and mildew.

Posters are also available in a downloadable version on the contest website: [www.MadeByMilkContest.com](http://www.MadeByMilkContest.com).

If you have any questions about the carton construction contest along the way, please feel free to contact me.

Have a great time making your **Inventions!** creation – and good luck!

Katie

P.S. Be sure to check out our spring contest, Carton 2 Garden, at [www.Carton2Garden.com](http://www.Carton2Garden.com).
